

KMH Systems

Trusted Partner In Energy Management

www.kmhsystems.com

Phase I - Discovery

- KMH provides a complimentary survey to review your current facility situation

Phase II - Evaluation

- KMH evaluates data to determine if there are compelling ROI and operational benefits

Phase III - Recommendations

- KMH constructs a proposal with detailed ROI analysis, rebate management and environmental impact

Phase IV - Results

- Energy Reduction, Improved Light Quality, Carbon Footprint Reduction, Dynamic Control Options, Recycling

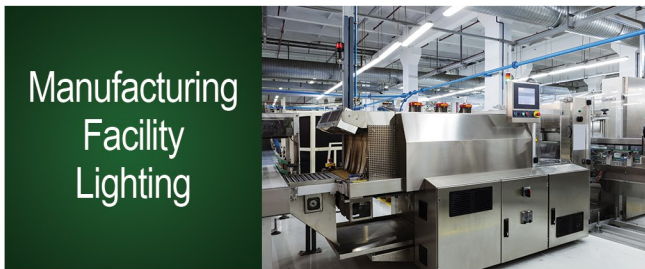

Energy Independence

WHAT YOU CAN EXPECT - SAMPLE SAVINGS CHART

METAL HALIDE	ENERGY EFFICIENT FIXTURE	WATTAGE SAVED	PERCENT SAVED	ANNUAL SAVINGS	LIFE CYCLE SAVINGS
465 Watts	4 Lamps T5 = 234 Watts	231 Watts	50%	\$62,370.00	\$1,247,000.00
465 Watts	4 Lamps T8 = 147 Watts	318 Watts	68%	\$78,030.00	\$1,560,600.00
465 Watts	*LED Highbay = 123 Watts	342 Watts	74%	\$93,960.00	\$1,879,200.00

Savings based on 500 fixtures running 6700 hours at \$0.08 per kwh. Actual savings can be dramatically higher when taking into consideration transmission, peak demand, taxes and other surcharges.

*100% maintenance reduction with 100,000+ hrs of life. Fixture wattage and type recommended will be based on a site survey.

Intelligent Lighting Decisions Reflect Well On You

From manufacturing facilities, to warehouses and transportation depots, the key to efficiency is the integration of intelligence — sensing, controls and wireless networking — into well-designed high bay luminaires.

The result? Dramatic improvements in efficiency and control, new levels of flexibility, accelerated project payback periods, and new insights into how facilities are being used.

A simple retrofit with minimal design or engineering can decrease electricity usage by more than 50%. This translates to reduction in lighting related costs by more than 50%. An energy efficient lighting design provides improved quality of light too!

KMH has the products and expertise needed to help you complete any lighting retrofit project.
