

# IT'S ABOUT UPTIME

For over 100 years, Autocar has been manufacturing trucks that stand the test of time. We are experts in the design and manufacture of severe-service trucks that play a central role in the work businesses use them for. We not only make some of the toughest trucks on the road, but also we have one of the industry's most comprehensive warranties to back them up. Combine this with an incredibly responsive best-in-class service team to ensure we maximize your uptime. The more your trucks are up and running, the more your costs are down and profits are up! We support over 34,000 trucks on the road each day.

Contact us first. **Autocar personally manages the service** experience until you're back up and running

Each and every Xspotter goes through a **complete end-of-line computerized inspection, dyno testing, and personal quality review** to make sure each truck arrives ready to work

Cabs are fully immersed in **premium E-coating to eliminate corrosion**. It's the same E-coating system used on cars and trucks

Built on the **most rugged and durable welded steel frame**, chassis and cab combination to ensure long-life

**Extremely robust hydraulics** system designed into every Xspotter for high-performance up/down speeds and durability

Premium components you know and respect from the industry's leading supply base means it's easy to find parts and mechanics that know how to make repairs

THEY MADE IT GOOD  
WE MADE IT  
GREAT

XSPOTTER

For over 40 years the Terminal Tractor has been the right tool for moving trailers and containers in less time. For Autocar, however, being good isn't good enough. We took the Terminal Tractor and made it *great* by focusing on three areas that needed the most attention: **Safety**, **Productivity** and **Uptime**. These are the guiding principles behind all Autocar trucks and they make the difference between a good work truck and a *great* work truck.

## THE FIRST IN SAFETY

Keeping drivers out of harm's way is not only good for drivers, but also it's good for business. 26.5% of all workers compensation claims are due to falls, 10.5% are bodily reactions (injuries caused by bending, climbing, reaching, standing, sitting, slipping or tripping without falling), and 9.3% are from people being struck by an object. The Xspotter reduces risk in all of these areas making it the clear choice for companies that value the safety of their drivers and want to reduce worker's compensation claims.

Source: 2011 Liberty Mutual Workplace Safety Index

**By far the largest clear sight** operating visibility in the industry allows for total visibility in all directions—it's like being in a bubble.

**Extremely spacious interior** means less operator bending, twisting and bumping during numerous entries and exits from cab while spotting trailers.

**Strategically positioned grab handles** are always within reach to ensure three points of contact at all times, up & down, forward or backward.

**Extra-large and aggressive foot grips** on all possible walking surfaces prevent slips, falls and injuries

**The most heavy-duty frame cab and bumper** combination of any Terminal Tractor means that drivers walk away from collisions, trucks are repairable

**Extra vehicle weight structure** minimizes risk of roll-overs and tipping during jack-knives

**Premium coach-style dual arm pantographic windshield wipers** are the best-in-class for wipe coverage and clear visibility

**Plenty of outside work light options** increase nighttime visibility to reduce accidents with people and objects

**Highly-visible seat belts** encourage safety compliance because they can be seen from outside the truck

**Autocar's Smart-Air Lockout** system ensures trailers are not dropped while moving

## EMPHASIS ON DRIVER PRODUCTIVITY

Terminal Tractors have been small, cramped, no-frills machines that are notoriously noisy with poor suspension and horrible climate control making them exhausting to operate. Autocar changed this by creating a Terminal Tractor that drivers actually enjoy operating. Starting with the roomiest Terminal Tractor cab ever built, we created an environment where drivers can stay comfortable and move faster in/out increasing productivity without sacrificing safety.

**Large, illuminated gauges and switches**

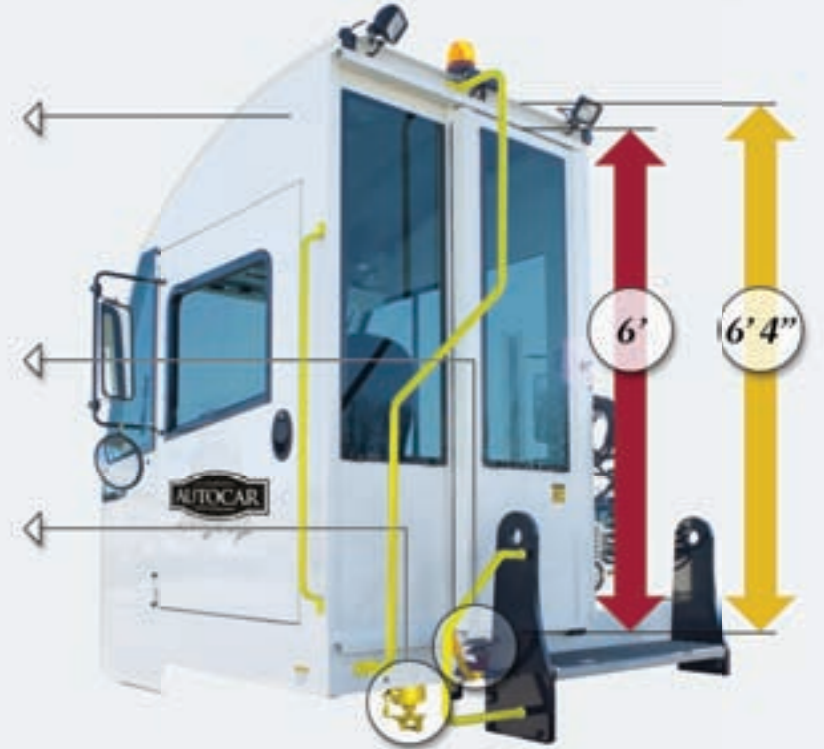

**Blended HVAC automotive-style system** keeps entire cab cool in summer and warm in winter even when the door is frequently opened and closed

**Well-positioned simple push-button transmission controls, easy-to-reach 5th-wheel lift lever**

**The tallest cab in the industry** means no more ducking and easier movement in and out

**Ground-level fluid checks** are fast and easy, safe checks

**Four-point premium cab suspension** creates comfortable air ride for drivers

**Power steering with a mechanical back-up** designed for low-effort sharp turns

**Much more leg and belly room** easily accommodates large drivers

**Fully-adjustable air-ride seat** with a durable Codura cover
